Detailed Action

1.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Tokura.

With respect to claim 1, Tokura teaches a digital printing system, shown by figure 1, comprising: a personal computer 1 comprising a printer driver (elements 4-7 taken together), wherein said printer driver receives print data and compresses said print data (see compression generating means 5, see middle of figure 1); a printer 2 operatively connected to the printer, comprising a data expansion system (elements 11 and 12 together) and a page width color inkjet print-head 10; and a transmission system (elements 6 and 11 taken together) operatively connected to both said personal

computer and the printer for transmitting the compressed print data from the personal computer to the expansion system of the printer.

With respect to claim 8, Tokura teaches expansion of compressed data according to paragraph 45. See also the last 8 lines of paragraph 54.

2.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tokura .

Tokura teaches all of the subject matter upon which the claim is dependent except for the USB connection as claimed. While the type of connection between computer 1 and printer 2 is not discussed, it would have been obvious to one of ordinary skill in the art to replace the connection of Tokura with a USB type as a matter of convenience or design choice. Moreover, no other advantage is suggested as to the use of a USB connection means so it would have been obvious to use it as a matter of convenience in that its use does not appear to be essential to the invention.

3.

Claims Objected To As Containing Allowable Matter

Claims 2-6, 9 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
